

Temperatures

Question:

My MyChron5 display shows EGT channel labelled as CHT: why?

Answer:

According to the temperature value detected in the first 30" after switch-on, MyChron5 labels a sensor as EGT (Exhaust Gas Thermocouple) or CHT (Cylinder Head Thermocouple).

If after updating the firmware the problem persists, please e-mail data to firmware@aim-sportline.com with a short explanation.

AiM always recommends to update MyChron5 firmware to the latest available firmware version.
