

Demo Mode

Demo Mode management

Question:

How can I activate my MyChron5 Demo Mode?

Answer:

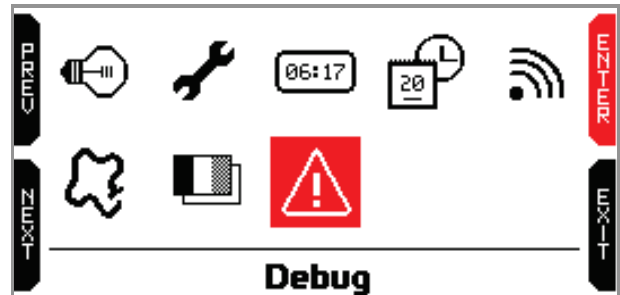

MyChron5 Demo Mode can be enabled and disabled from the device menu directly, following the steps below:

- Keeping the ">>/OFF" button pressed, switch MyChron5 on pushing the "ON/VIEW" button. When alarm LED 1 blinks red and logo appears, release the left button: backlight and LED bar will light up, changing color automatically.

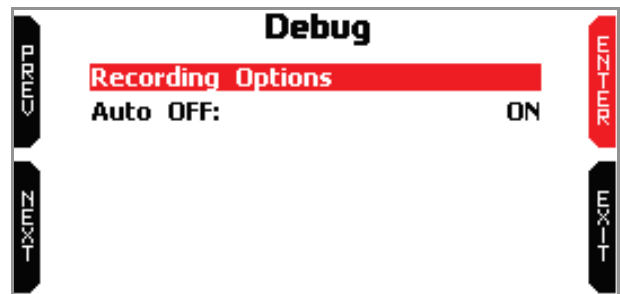

Demo Mode

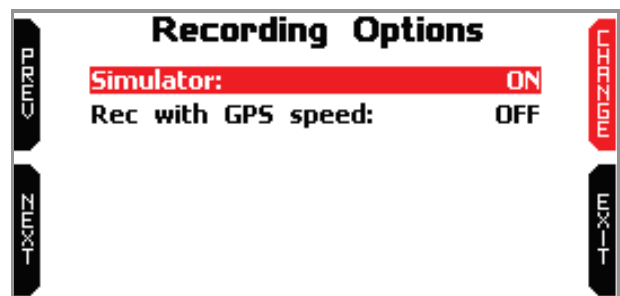

- Enter the device menu: the "Debug" icon is available (second row; warning icon). Press "Enter" to open the Debug menu.

- Press "Enter" again to enter the "Recording options" menu.

- At this point, the "Simulator" option is available: setting it as "ON" and going back to the device main page, the system Demo Mode starts working.

If Demo Mode is left enabled, MyChron5 can be turned off pressing the two right buttons together ("MEM/OK" + "ON/VIEW") and turned back on pressing "ON/VIEW" button normally.

To turn the Demo Mode off, follow the previous steps and set Simulator option as "OFF".
