Internal storage capacity

Domanda:
How big is the memory inside the AiM MXx 1.2 and EVOx devices and how many tests can I store into them?

Risposta:
The MXx 1.2 and EVOx have an internal memory storing up to 4 GB. Dealing with EVO5, it also manages SD cards with memory capacity up to 128 GB.

Up to 100 different sessions can be stored and downloaded from the devices. The internal memory is managed in a circular way, so the latest 100 tests will overwrite the oldest ones.
